## Create Spark Context

Main entry point for Spark functionality. A SparkContext represents the connection to a Spark cluster, and can be used to create RDD and broadcast variables on that cluster.

My Roll No. Is : DS5B-2137

```
In [ ]: from pyspark import SparkConf, SparkContext
```

```
In [ ]: if __name__ == "__main__":
          conf = SparkConf().setAppName("exam").setMaster("local[2]")
          # AppName : A name for your job, to display on the cluster web UI and Master: Cluster
          sc = SparkContext(conf = conf)
```

## Create a RDD by reading the csv file

A Resilient Distributed Dataset (RDD), the basic abstraction in Spark. Represents an immutable, partitioned collection of elements that can be operated on in parallel.

My Roll No. Is : DS5B-2137

```
In [ ]: data = sc.textFile("amazon.csv")
```

Print the top five raws of dataset

```
In [ ]: data.take(5)
```

```
